

Getting your MAC Address From Mac (Apple Computer) OS X

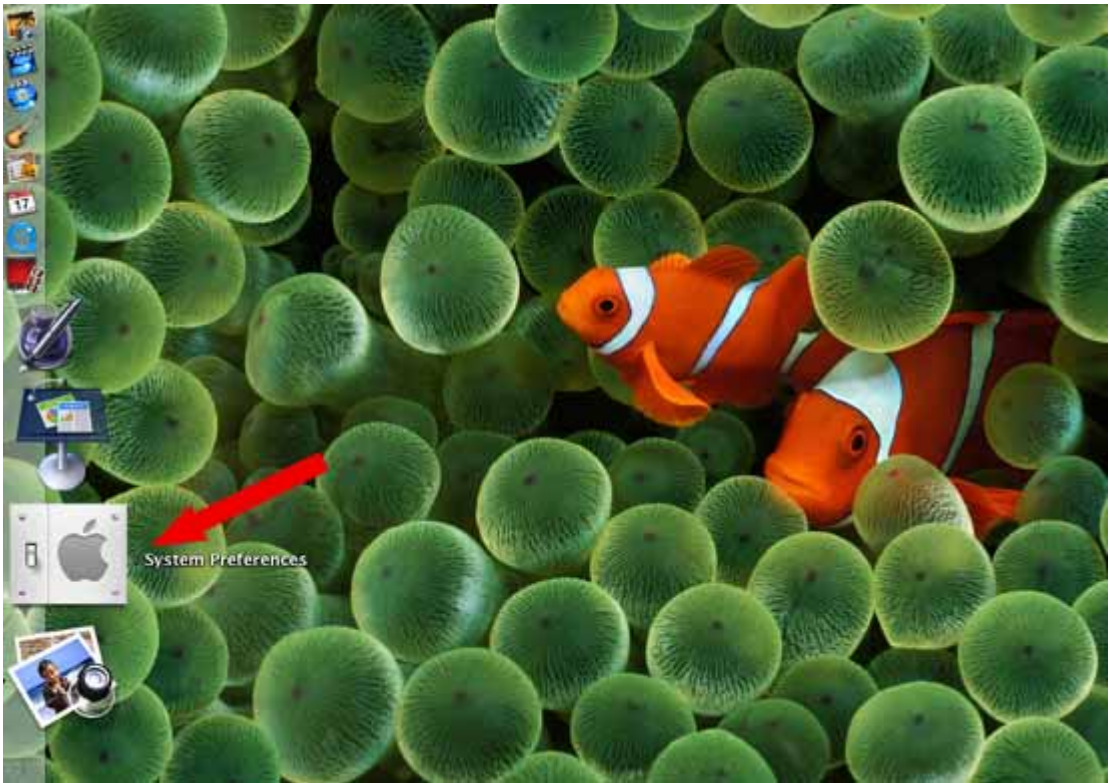

The acronym “MAC” is a computer networking acronym, not related to Apple Computers. A MAC address is also known globally as a physical address or hardware address for any networked device.

In Apple’s OS X operating system, they refer to the wireless MAC address as an “Airport ID”.

Follow these steps to locate yours

- 1) On the desktop icons, click on System Preferences
- 2) Click on Network
- 3) Scroll the “Show” field until you find “Airport”
- 4) The number you need shows up as “Airport ID”
- 5) Write this information down. No settings need to be changed or saved so you can close out of everything.

For graphic instructions, see images below:
